**Preparation**

Please pay careful attention to the instructions when preparing milk formula. Incorrect preparation or storing a prepared feeding bottle for a longer period of time can be harmful to health, eg. due to undesired bacterial growth.

For this reason, always prepare the formula from scratch before every meal and feed immediately. Do not re-use leftovers. Clean bottle, teat and ring thoroughly. Close the opened sachet tightly after every use, store in a dry place at room temperature (max. 25 °C) and use up within 3 weeks.

Please do not warm up milk formula in the microwave oven (danger of scalding).

Boil fresh drinking-water and leave it to cool down to approx. 40 °-50 °C.

Pour 2/3 of the prepared water into the feeding bottle.

Fill the measuring spoon loosely and level with the back of a knife. Put the recommended amount of powder into the feeding bottle.

**Drinking amount & dosing**

The drinking amount per feeding bottle may vary from baby to baby. The recommended drinking amounts and the number of bottles per day are guideline values. Your baby does not necessarily have to empty the feeding bottle completely.

**Please use the enclosed measuring spoon only!**

**Babies need about 5 meals a day.** With every newly introduced jar or pap meal, you should drop one bottle feeding.

**Important information**

**...on your baby's nutrition**

Exclusive breastfeeding during the first six months is perfect for your baby. Like any follow-on milk formulae, HiPP 2 ORGANIC should basically be used from six months onwards as part of a mixed diet, and not as a substitute for breast milk during the first six months. Individual growth and development requirements of your baby might make it necessary to introduce follow-on formulae to your baby's diet as part of a mixed diet at an earlier point in time. Please consult your paediatrician.

**...on your baby's dental health**

Just like breast milk, all follow-on formulae contain carbohydrates. They are an important part of your baby's nutrition. Permanent contact of your baby's teeth with food containing carbohydrates may lead to severe tooth decay. Therefore, do not leave the bottle to your child for permanent sucking and let your child drink from a cup as early as possible.

Please pay attention to your baby's balanced diet and healthy way of living.

**Organic production in HiPP Top Quality**

Out of conviction, we firmly believe in strictly controlled organic ingredients. With regard to the choice of raw materials, we clearly exceed the strict statutory requirements for follow-on milk formulae. We guarantee the highest possible safety for you and your baby by means of very strict quality controls starting with the raw materials right through to the finished product.

**Composition**

	per 100 ml ready-to-drink product*
<b>energy</b>	292 kJ

gluten-free (as required by law)

GMO-free (in accordance with the EC Organic Farming Regulation)

**HiPP 2 ORGANIC: with the best ingredients nature has to offer**

For more than 50 years, we have been putting our entire diligence and experience into producing excellent milk formulae. As a pioneer in organic production, we have firmly believed in using the best organic ingredients for milk formulae for decades. We are convinced that, for the period after breastfeeding, our organic milk formulae can be an important contribution towards healthy development.

**For the sake of your baby's health HiPP 2 ORGANIC contains:**

- ✓ **natural Omega-3 fatty acids from organic ingredients:** HiPP 2 ORGANIC contains essential Omega-3 fatty acids that are particularly important, because the body is unable to produce them on its own, and they are needed for brain and nerve cells and thus for the healthy growth of your baby.
- ✓ **natural calcium:** calcium is an important nutrient for healthy development. Besides valuable calcium from milk, HiPP 2 ORGANIC additionally contains calcium carbonate that is derived from natural mineral sources and supports the development of healthy bones.
- ✓ **valuable nutrients for growth and development:** in accordance with the legal requirements for follow-on milk, HiPP 2 ORGANIC provides your baby with the exact amounts of vitamins and minerals that babies old enough to be fed jar food need for healthy growth besides jar food.
- ✓ **high-quality protein from organic milk:** age-appropriate amounts of high-quality, easy-to-digest protein that is fully derived from organic milk.

**HiPP 2 ORGANIC is easy to digest and provides age-appropriate satiety.** Pleasantly creamy with easily digestible, gluten-free starch.

**Use**

- HiPP 2 ORGANIC is formulated to suit the particular nutritional needs of babies from 6 months and supports their healthy development.
- after breastfeeding
- after any other infant formula
- It is never a problem to change over to HiPP 2 ORGANIC from any other follow-on milk.

**If you have any questions concerning your baby's diet**
